## Ecosystem

## **TRY** YOURSELF

## ANSWERS

**1.** Two structural components of an ecosystem are biotic and abiotic factors. Biotic components are living organisms such as plants and animals and abiotic components are non-living factors such as water, air, nutrients and solar energy.

**2.** The term ecosystem was introduced by A.G. Tansley.

**3.** Two ecosystems with high productivity are: coral reefs and estuaries.

**4.** A temperature of 25°C and more hastens decomposition while temperature less than 10°C reduces rate of decomposition.

**5.** Aquatic food chain :

Phytoplankton  $\rightarrow$  Zooplankton  $\rightarrow$  Small crustaceans  $\rightarrow$  Predator insects  $\rightarrow$  Small fish  $\rightarrow$  Large fish  $\rightarrow$  Crocodile.

**6.** Lindeman proposed 10% law, which states that in a food chain, only 10% of energy is transferred from one trophic level to other.

**7.** Pyramid of number is inverted in tree ecosystem, as the number of individuals increase from lower level to higher trophic level.

8. Producers (autotrophs) occupy the base of a pyramid.
